

Third-Party Chief Information Security Officer

| Service Overview

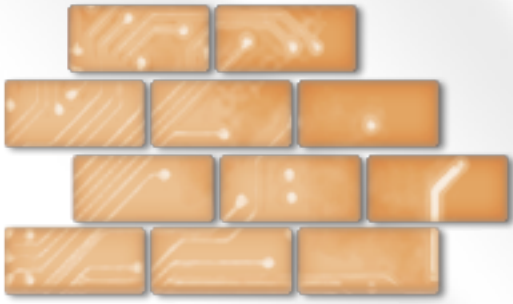

In today's interconnected and global business environment, there is an increasing need for information security protection and cybersecurity services.

A2 Cybersecurity offers Managed Cybersecurity Platform solutions and third-party chief information cybersecurity services to combat the problem of malicious network activity.

Our third-party CISO service works with your organization to conduct an initial network risk assessment of the existing IT infrastructure and review normal operating procedures. We work with the organization to deploy a cybersecurity policy to mitigate risk. Finally, we deploy an on-premise cybersecurity appliance to continuously monitor strategic points in the network for unwanted activity.

| Service Objectives

- Develop a comprehensive data security plan and identify potential IT vulnerabilities.
- Build long-term security solutions to mitigate risk and safeguard sensitive data storage and communication.
- Provide a designated Chief of Information Security to strategize with the company IT staff and provide information security planning, oversight and IT strategy.
- Conduct routine network threat assessment tests, information security audits, and provide required documentation to handle government regulation.
- Deploy and maintain on-premise Intrusion Detection System and vulnerability scanner.

Third-Party Chief Information Security Officer

| Technologies Used

Network Vulnerability Assessment

A2 Cybersecurity utilizes advanced threat definitions from Nessus, AlienVault, and OpenVAS vulnerability and penetration testing engines.

Multi-Factor Authentication

A2 CyberSecurity has a partnership with Duo Security, Inc. to provide secure, cost-effective multi-factor authentication.

Information Audit Trails and Trip-wire Systems

A2 Cybersecurity utilizes host intrusion detection software from OSSEC, and Redhat Enterprise Linux on-premise NAS for secure file storage and file audit tracking.

Intrusion Detection Systems

A2 Cybersecurity is a certified partner with Alienvault, Inc. We deploy AlienVault USM physical appliances for sophisticated network intrusion detection.

Intrusion Prevention Systems

A2 CyberSecurity utilizes Barracuda Networks NG Firewall for intrusion protection systems.

| Why A2 CyberSecurity?

A2 CyberSecurity's depth of expertise and experience within the industry, coupled with our customer-first approach, enables us to provide tailored solutions and personalized support for small to enterprise level organizations.
