

Managed Security Service Platform - A2 CyberSecurity

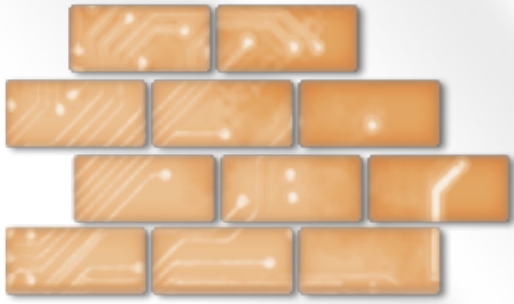

Keeping up with today's constantly changing threat landscape can be stressful and expensive. Many companies are turning to outsourced managed security services to fulfill security and compliance requirements and keep their systems safe.

| Service Objectives

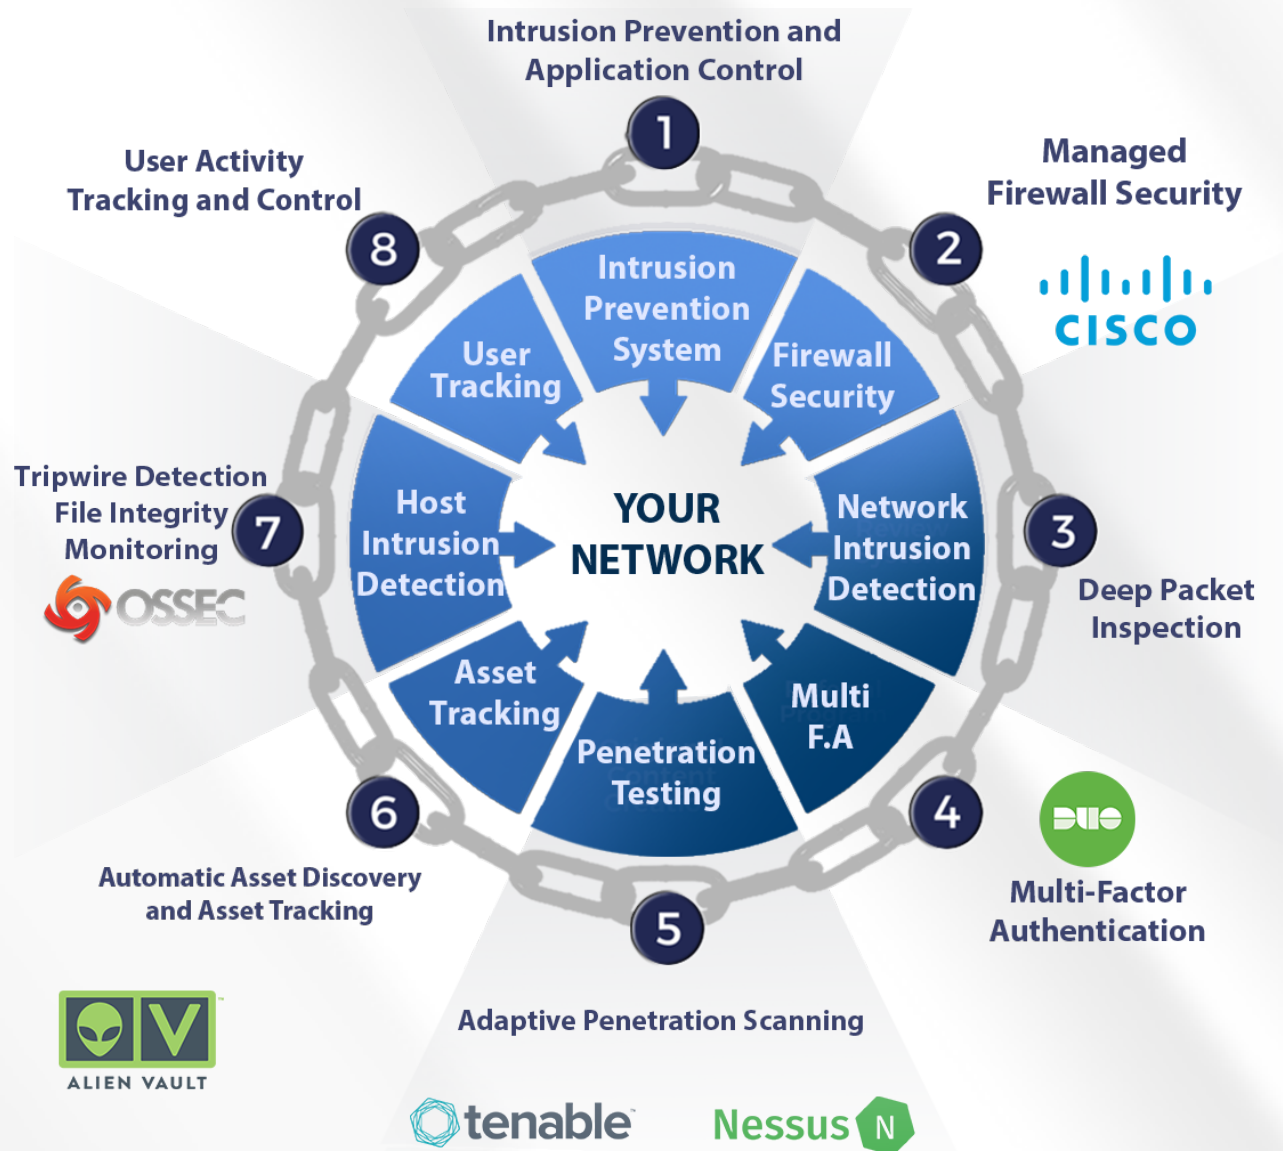

- Address Compliance Requirements with log data storage, monitoring systems for security events and periodic scanning of systems for security vulnerabilities
- Manage Costs - Our subscription-based pricing model provides a predictable monthly fee. This allows you to manage costs in order to avoid hiring an additional full-time employees.
- Provide Continuity and Consistency - A2 CyberSecurity maintains a team of analysts with practices in place to provide continuity and consistency.
- Detect Ransomware - A2 CyberSecurity detects ransomware and other variants of malware that can have a critical impact on your network if not discovered. A2 CyberSecurity alerts you within minutes of detection, and works with you on a strategy to quickly neutralize the threat.

| Why Use a third-party MSSP?

The MSSP takes the burden off you by providing a team of expert analysts to fulfill your security and compliance requirements and provide you with peace of mind. This comprehensive and scalable service helps you quickly, easily and cost effectively deploy all the security controls you need in order to detect, analyze, log, monitor and react to an attack.
